ANKUSH PATIL

Fresher | Entry-Level IT Infrastructure & Linux Administration

Bengaluru, India | +91 93167 42856 | ankush15102003@gmail.com
linkedin.com/in/ankush-patil-a12b07299 | github.com/CyberAgents01

PROFESSIONAL SUMMARY

Graduate with a strong foundation in IT and infrastructure, and hands-on experience in Linux and basic networking. B.Tech in Computer Science and Engineering (CGPA 8.85), studying CDAC PGCP-ITISS, with a 6-month VAPT internship. Built a complete Linux server on CentOS Stream 10 (DHCP, DNS, web, file sharing), secured it with Red Hat server hardening steps, and automated website deployment with Jenkins and Ansible. Good at finding the root cause of a problem and fixing it step by step.

TECHNICAL SKILLS

Operating Systems	Linux (CentOS Stream, RHEL family), Windows Server
Linux Administration	Users and groups, file permissions (chmod, chown), systemd services, log reading (journalctl), troubleshooting
Red Hat Server Hardening	Allow-only-needed-services rules (firewalld), strict file ownership and permissions, secure Samba shares, key-based SSH
Networking	TCP/IP, IP addressing and subnetting, static IP (nmcli), SSH, ip, nslookup, dig, curl
Network Services	DHCP (Kea), DNS (BIND), Apache HTTPD, Samba, NFS sharing
Windows Server	Active Directory basics, user and group management, FSRM basics, client lab setup
DevOps and Virtualization	Git, GitHub, Jenkins (CI/CD), Docker, Ansible (playbooks), Kubernetes (learning), Oracle VirtualBox

PROJECTS

Linux Server Setup and Red Hat Server Hardening

CDAC PGCP-ITISS

CentOS Stream 10 (RHEL family) | Kea | BIND | Apache | Samba | firewalld | nmcli

What it is: One central Linux server that gives IP addresses, domain names, a website and shared files to all computers on a private network (172.30.20.0/24), then secured to reduce the attack surface.

- **Network:** Gave the server a fixed IP (172.30.20.10/24) with nmcli, so all services run on one stable address.
- **DHCP (Kea):** Set up Kea DHCPv4 so clients get IPs automatically; confirmed a client lease in 172.30.20.0/24 using service status and journalctl logs.
- **DNS (BIND):** Created a master zone (kush.in) with SOA, NS and A records; validated it with named-checkconf, named-checkzone and nslookup.
- **Web (Apache):** Hosted an internal website (/var/www/html) and opened it from a client at http://company.kush.in.
- **File sharing (Samba):** Shared /home/Shared with a dedicated user (smbpasswd), guest access off in smb.conf, ownership and permissions set; tested with smbclient.
- **Server hardening:** Opened only the ports the server needs (DNS, DHCP, HTTP, Samba) with permanent firewalld rules, kept Samba login-only, and limited the share to its owner and group.
- **Troubleshooting:** Fixed 3 real faults (firewall not running, wrong Samba service name, missing Samba user) and wrote a checklist.

  Result: Linux and Windows-style clients got an IP, opened the website by name and used the secured share.

Automatic Website Deployment (CI/CD)

Jenkins + Ansible

Jenkins | Ansible | GitHub | Apache | SSH | 2 Linux VMs

What it is: When I push a change to GitHub, the website on a second server updates by itself (GitHub → Jenkins → Ansible → Apache).

- **Jenkins:** Connected GitHub and used SCM polling (every minute) so a new commit starts a build automatically.
- **Ansible:** Wrote a playbook that copies the new index.html to the remote Apache server and manages the Apache service.
- **SSH:** Set up passwordless SSH between the two VMs so Ansible runs without asking for a password.

  Result: Jenkins builds #15 and #16 updated the live website in the browser with no manual login to the server.

NetCluster

Python Project

Python | Socket Programming | RAI Framework

- Built a Python system (frontend and backend, AI-assisted) that shares tasks between computers using sockets and RAI.

INTERNSHIP EXPERIENCE

VAPT Trainee | EyeQDot.net, Mangalore

6 Months (Task-Based)

- Worked on vulnerability assessment and penetration testing basics; carried out assigned security testing tasks.
- Wrote down findings and prepared reports for each task.

EDUCATION

B.Tech, Computer Science and Engineering | Sandip University, Nashik — *2026 | CGPA 8.85 / 10*

CDAC PGCP-ITISS | C-DAC, Bengaluru — *Pursuing (6 Months)*

CERTIFICATIONS AND LANGUAGES

Certifications: Basic Ethical Hacking Course (VAPT Certification) | Internship Completion Certificate, VAPT Trainee, EyeQDot.net | Defensive Cyber Techniques Course, DROP Organization

Strengths: Problem-solving, analytical thinking, teamwork, documentation, eager to learn. **Languages:** English, Hindi, Marathi, Gujarati
